Possible Problems: Insect: Mites, aphids, snail and slugs are possibilities

Habit: Clumping

Diseases: Root rot, if they don't have good drainage

Day Length for Flowering: Long day

Do NOT bury the crown of the plug

Description

A funny thing happened on the way from the lab... 'Crazy Canary' is a spontaneous mutation of our garden favorite 'Canary Feathers', but 'Crazy Canary' has foliage that is wildly variegated with canary yellow. The bright yellow splashes contrasts very well with aquamarine blue foliage background. This truly does have crazy, wild variegation but has retained all of the vigor of the parent. 'Crazy Canary' displays bright yellow, fragrant flowers in the spring and early summer. A premium product!
